

We have provided updates on access to campus and the current power status.

We are happy to report that production across all departments is back to a substantial percentage of pre-Ida levels and is continuing to increase through the tremendous efforts of our operations, production and facilities teams.

### Harahan Campus Access

**Production Employees:** you should report to campus as instructed by your supervisor.

**Office Employees:** we are still limiting access to campus but people can report per the following starting tomorrow:

If you have **critical** work that can't be done off campus because you have no power and/or internet or due to the nature of the work.

**Please note as below not all buildings have power.**

If your building has power, check with your supervisor prior to going to campus to ensure we have appropriate capacity limits due to COVID.

If your building does not have power restored and you need access per the above requirements, please email your supervisor. Supervisors – please email me after hearing from your teams so we can work to find appropriate space.

If you are able to continue to be productive from your current work environment, **please continue to do so.**

### Power Restoration

We have fully restored Entergy power to some buildings on campus while others are on generators and the remaining with no power at all. A further constraint for us is that we lost 2 chillers during start-up efforts so we have limited chilled water and air conditioning for all of campus and are prioritizing it for our production machines and work areas. We are confident Entergy is doing everything possible for full restoration of power but do not have a timeline. The chillers are scheduled to be fixed on Tuesday. Power status per building is as follows:

Entergy Power Restored

- Hammond Campus
- 301FO – D
- 5307
- HR, Wet Test and Facilities
- Machinery
- Central Plant, 221, 211, 201 and Stair (Toler)

Generator Power (not connected back to Entergy)

- Machine Shop
- 5200B IT area
- ThermoDrive
- ION (very limited area)

No Power

- 116 LL
- Tuna
- Pratt
- 5200 A&B
- 5129 Storey
- 5135 Storey
- 5140 Storey
- 109 Research Drive
- 221 Research Drive

Entergy Power Available But Repair Needed

- Modern Farms

Thanks all for the patience, understanding and incredible work during this time.
